Command Reference > SCPI Command Reference > MMEMory Commands > MMEMory:MDIRectory

MMEMory:MDIRectory <NewDirectory>

Creates a new subdirectory for mass memory storage in an existing directory.

Setting parameters:

<NewDirectory>	String parameter to specify the new directory. Either the full path or a subdirectory for the current directory (see MMEMory:CDIRectory).

Example:	MMEM:MDIR 'C:\Users\Public\New_Directory' Create the specified directory. The parent directory C:\Users\Public must have been created before. MMEM:MDIR 'C:\Users\Public\New_Directory\New_Subdirectory' Create an additional subdirectory. MMEM:CDIR 'C:\Users\Public\Instrument'; MDIR 'New_Directory' Create an additional directory C:\Users\Public\Instrument\New_Directory.
Usage:	Setting only
